» Projects Undertaken

>> B.E. Project

Duration: 1 Year

Project: BLOOD BANK MANAGEMENT SYSTEM USING RFID.

Description: The main goal of our project is to avoid mismatching of blood bags. This can be avoided by using RFID detection techniques. It also greatly reduces the human factor in blood handling.

M.E. Project

Duration: 1Year

Project: Printed Double T- monopole Antenna for 2.4/5.2 GHz Dual Band WLAN Operation.

Description: Microstrip patch antennas are attractive and popular antenna due to their advantages such as light weight, conformability and low costs. A novel and simple printed dual band double T- monopole antenna is proposed. . Prototypes of proposed antenna will be used for WLAN operation in the 2.4 and 5.2 GHz bands.

PG-DAC Project

Duration: 6 Month

Project: Online Auction System.

Description: The purpose of this project is to build an online auction and bidding system, a place for buyers and sellers to come together and trade almost anything. In fact, the system consists in a web-portal where registered users can propose new auctions, place bids in order to buy the items on auction.
